

SPRECTEX AI

Business Proposal

Smarter Coffee Intelligence

AI POWERED VIDEO ANALYTICS SOLUTIONS

www.spectexai.com

Introduction

Transform your existing CCTV infrastructure into a real-time business intelligence system that drives revenue, reduces waste, and elevates customer experience.

Prepared for Coffee Shop Owners

The Problem with Traditional CCTV

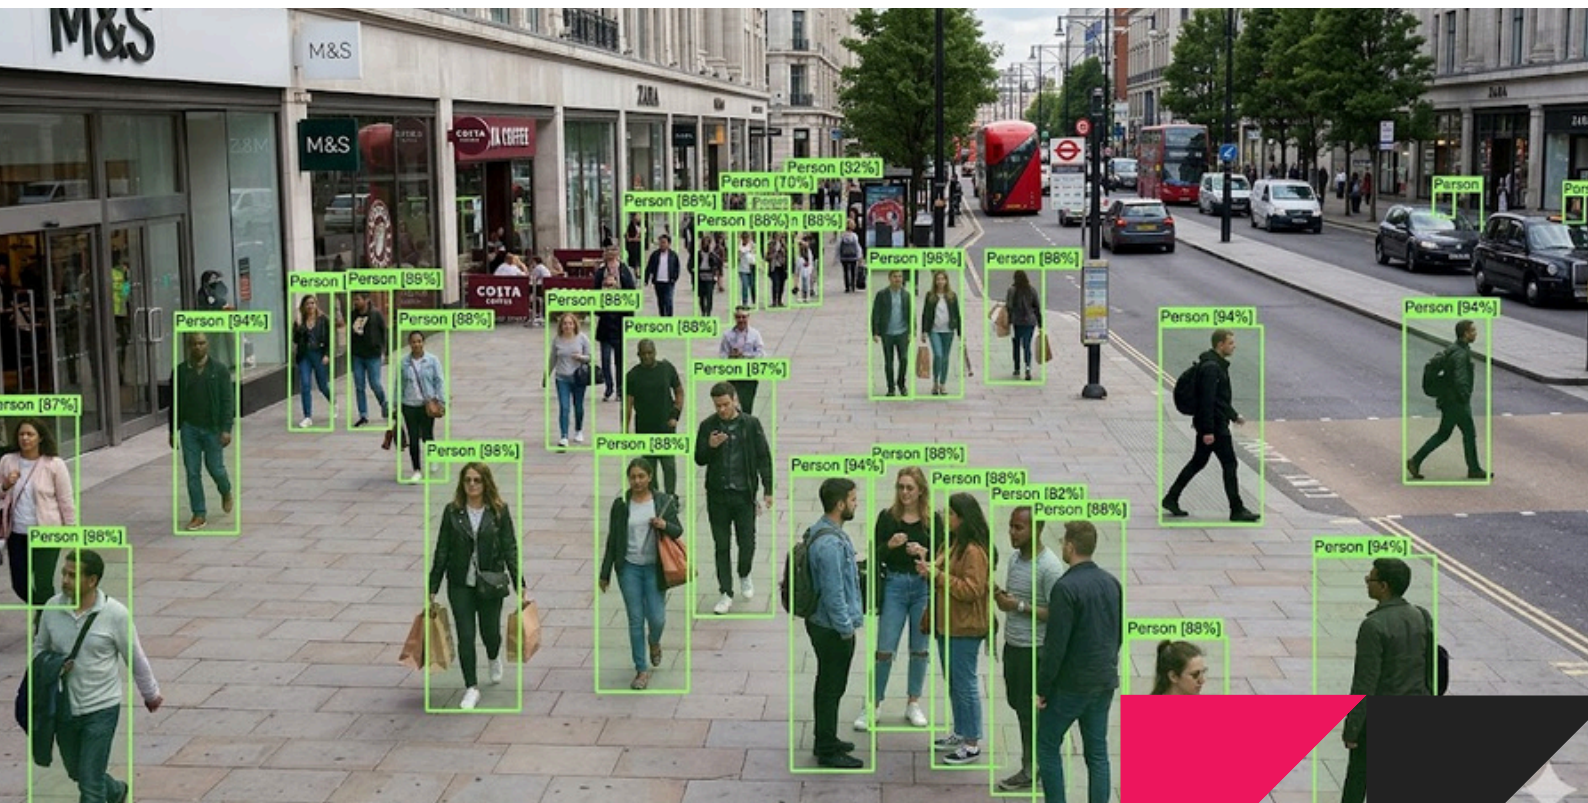

Your CCTV cameras capture every customer interaction, every queue buildup, every idle table — and do nothing with it. Businesses make operational decisions based on guesswork, resulting in overstaffing, long queues, and missed revenue.

Our Solutions

Sprectex AI layers intelligent video analytics on top of your existing cameras. No new hardware. No disruption. Just actionable insights flowing directly to your operations team in real time. Plug-and-play AI integration with your current camera feed. Our system processes video in real time, surfaces insights through a clean dashboard, and sends alerts when immediate action is needed.

Our Mission

Sprectex AI transforms your existing CCTV cameras into a smart business system — showing you how many customers are coming, how long they wait, and how efficiently your staff is serving them. Reduce waiting time, serve more customers, and increase daily revenue without changing your setup.

t

Real Impact on Real Businesses

Coffee shops deploying Spretex AI consistently report measurable improvements within the first 30 days of operation. By transforming existing CCTV cameras into intelligent business analytics tools, owners gain real-time visibility into customer flow, service efficiency, and seating utilization.

Typical results include shorter customer wait times, improved staff productivity, better peak-hour management, and increased table turnover. These operational improvements often lead to higher daily sales, enhanced customer satisfaction, and more informed business decisions based on real data rather than assumptions.

30%

Faster Customer Service

25%

Peak-Hour Efficiency Gain

40%

Queue Abandonment

Increased Revenue

Serve more customers in less time. Reduce abandoned orders caused by long waiting lines. Improve throughput during your highest-value peak windows.

Elevated Customer Experience

Faster order processing means happier customers who return more often. Less waiting frustration and better seating availability drive loyalty and word-of-mouth.

Reduced Operational Costs

Schedule staff based on verified demand data, not guesswork. Avoid unnecessary wages during quiet hours while ensuring full coverage when it matters.

Data-Driven Decisions

Know exactly when customers come, how long they wait, and when they leave. Use this to optimise counter layout, menu placement, and promotional timing.

ZERO EXTRA HARDWARE

Works with Your Existing Cameras

Sprectex AI is designed to integrate directly with your current CCTV infrastructure. No ripping out existing systems. No capital expenditure on hardware. Just intelligence layered on top of what you already own.

- ✓ Compatible with all major CCTV brands and DVR/NVR systems
- ✓ Cloud or on-premise deployment options
- ✓ Live dashboard accessible from any device
- ✓ Real-time alerts via SMS, email, or app notification
- ✓ Simple setup — operational within 24 hours

PLUG & PLAY AI

Your cameras are already installed. We simply give them intelligence. Connect, configure, and start receiving insights — no engineers, no downtime, no disruption.

Goals

YOUR SOLUTION SHINE

Our mission is to enable businesses to make faster, smarter, and data-driven decisions without requiring expensive hardware upgrades. From customer behavior analytics and queue management to occupancy monitoring and operational optimization, Sprectex AI delivers actionable insights that directly impact revenue growth, customer satisfaction, and operational efficiency.

Three Pillars of Insight

01

Queue & Service Time Optimization

Our AI continuously monitors your counter area, detecting queue formation the moment it starts to build. It measures the exact wait time for each customer, triggers staff alerts when thresholds are breached, and provides historical data on your worst bottleneck windows.

Faster Service

Reduced Frustration

Higher Order Volume

Fewer Abandoned Sales

02

Customer Footfall & Peak Hour Analysis

Track precisely how many customers enter your establishment per hour, per day, per week. Identify your true peak windows versus your genuinely slow periods — and use that data to right-size your staffing schedule automatically.

Smart Scheduling

Reduced Labour Cost

Peak Preparedness

Demand Forecasting

03

Table Occupancy & Seating Intelligence

Gain a live view of which tables are occupied, which are free, and how long each customer has been seated. Measure average dwell time across time periods and use that data to maximise table turnover without compromising experience.

Better Turnover

Space Utilisation

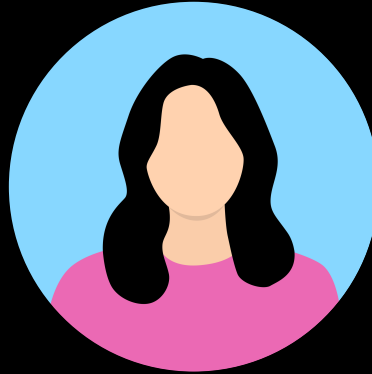

Higher Capacity

Dwell Analytics
